- Assume 28 Day Cycle
- Lupron starts 7 days before menstrual period. (Menses may be delayed.) Continue until HCG.
- Baseline ultrasound and Estradiol on 2nd or 3rd day of menstrual cycle.
- Gonadotropins begin and usually is given for 11 days, with ultrasound and estradiol most days until HCG is given.
- Progesterone begins the day of egg retrieval. Embryo transfer is 3 or 5 days later and progesterone is increased
- Pregnancy test is 15 days after egg retrieval.
